

Your help needed!

Currently the player does not support verse by verse playback. In order to do verse by verse the user must first play the surah and press the next verse button after each verse. The player learns those verse points and enables verse by verse for that file.

What a volunteer does is go through the above process for an entire reciter, and uploads the resulting data; which is done from within the program.

Those data files are used to enable verse by verse in other people's computers, and will be available for use in Islamic software development.

To volunteer, start by selecting a reciter, usually your favorite one.

Email us and tell us about your choice. We will give you a password for the upload feature.

Your work might help in the development of many applications for PC, phones, iPods etc.

Your help is also appreciated and Enshallah rewarded by Allah.
